it is two decades since mitchell feigenbaum s landmark papers on period doubling and the modern beginnings of what is now called chaos theory from the very beginning mechanics has been a central focus for modern nonlinear dynamical systems fluid structural machine and rigid body dynamics has been a fertile field for nonlinear phenomena and chaos in particular early experimental evidence for chaotic phenomena in mechanics gave the new chaos theory a mark of credibility importance and relevance that its earlier sister field catastrophe theory did not achieve the fact that mechanics straddles both physics and engineering also meant that mechanics became a pathway for direct application of chaos theory to applied problems so what is new in nonlinear dynamics and mechanics today first the scope of applications in solid mechanics has broadened to cover material processing inelasticity and fracture mechanics in rigid body dynamics more complex systems such as vehicles robotics and controlled machines have come into the purview of nonlinear dynamicists on the mathematics side of nonlinear dynamics it is now recognized that spatio temporal problems hysteretic and time delay problems are the new frontiers in this field also the term complexity has been added to the lexicon of chaos theory to describe the dynamics of many interacting sub systems which can exhibit self organization and evolution complexity analysis has gained a foothold in biological and some social sciences as well in fluid and chemical physics

for many years i have been interested in computer chess and have collected almost every learned paper and article on the subject that i could find my files are now quite large and a considerable amount of time effort and expense has been required to build up this collection i have often thought how difficult it must be for many computer chess enthusiasts to acquire copies of articles that they see referenced in some other work unless one has access to a good reference library the task is almost impossible i therefore decided to try to make available in one volume as many as possible of the most interesting and important articles and papers ever written on the subject such a selection is naturally somewhat subjective and i hope that i will not offend authors whose works have been excluded in particular i have decided to exclude any material which has appeared in the journal of the international computer chess association icca or in its precursor the icca newsletter the reason is simply that the icca itself is in the process of compiling a compendium containing the most important material published in those sources for further information on icca membership and publications the reader is invited to contact professor h 1 van den herik or dr jonathan schaeffer university of limburg computing science dcpaitment department of computer science university of alberta 6200 md maastricht edmonton netherlands alberta canada t6g 2hi
